11 **WHO WE ARE**

12 Interface is building people who build the web. Our goal is twofold: Build people's knowledge and skills for the web and increase the supply of technology talent for startups, small businesses, and corporations in the Midwest.

The business landscape is changing rapidly because of web technologies which has created a unique job market for both job seekers and employers. People with web skills can maintain their competitive edge in today's job market.

Interface is both a platform for learning and a platform for teaching. We understand that first and foremost it takes talented people to build talented people. Perpetuating this cycle of teaching and learning is powerful and benefits individuals and communities.

Interface provides practical training to meet the demands of job seekers and employers in today's job market. We offer students an immersive learning program lead by industry experts and a professional

2. Choose any other website and identify five unique tags used on the page.

a. Provide the link to the site.

b. For each of the five unique tags, please describe which element you are referencing.

a. http://www.timesonline.com/entertainment/local_entertainment/def-leppard-reo-speedwagon-fill-first-niagara-pavilion/article_2ba392ca-45d3-11e6-8f86-2706a26a73b4.html

b. 1. `<base href="http://www.timesonline.com/content/tncms/live/" />`

Located in the header section of the code. This tag specifies the base URL for all relative URLs in the document.

2. `<section id="main-top-container" class="container-fullscreen-region container-fluid"></section>`

The `<section>` tag defines sections in a document, such as chapters, headers, footers, or any other sections of the document. This tag is referencing the main top container, which includes the black menu bar at the top of the screen.

3. `<article itemscope ...
url="http://www.timesonline.com/entertainment/local_entertainment/def-leppard-reo-speedwagon-fill-first-niagara-pavilion...3b4.html">...</article>`

The HTML `<article>` element represents a self-contained composition in a document, page, application, or site, which is intended to be independently distributable or reusable (e.g., in syndication). For example, a news article. This tag designates the section that begins at the article's headline and ends just above an ad that is centered near the bottom of the page.

4. `<iframe src="http://stats-... style="position: absolute; width: 0px; height: 0px;"></iframe>`

The `<iframe>` tag specifies an inline frame. An inline frame is used to embed another document within the current HTML document. This tag appears shortly after the body, it appears it serves as an invisible container for the main article.

5. `<meta name="keywords" content=", concert news, first niagara pavilion concert news, entertainment news, reo speedwagon, def leppard">`

This tag is found in the header. Meta elements are typically used to specify page description, keywords, author of the document, last modified, and other information.
